

Neil Swainston

BSc (Hons) MSc PhD MRSB MRSC

 <http://neilswainston.org>
@ neil.swainston@gmail.com

Summary

- Bioinformatics, cheminformatics, machine learning, software engineering, computational systems and synthetic biology in academic and industrial environments.
- BSc Chemistry with Industrial Experience (first class); MSc Computing Science; PhD Computer Science.
- Professional software engineering skills.
- Team Leading and Project Management in industry.
- International research experience in Germany and France.
- Lecturing and undergraduate and postgraduate student supervision.
- Well published and cited (40 peer-reviewed articles, 5 with >100 citations; h-index: 19).
- Conference organising experience.
- Multiple successful grant applications (>£1.4M funding).

Employment

04/06 - **Manchester Institute of Biotechnology** Senior Experimental Officer
Centre for Synthetic Biology of Fine and Specialty Chemicals (SYNBIOCHEM)

I work in an interdisciplinary role focussing on 'omics experimental data analysis and interpretation through its integration with systems and synthetic biology approaches, driven by software development. My areas of expertise in experimental data cover quantitative proteomics, metabolomics and enzyme kinetics. I co-lead an international community focussed on the development of comprehensive predictive models of metabolism in human, yeast and other organisms, and this work has been both highly cited and publicised. Further work includes the improvement of metabolic modelling predictions through integration of experimental data. More recent work has covered computational synthetic biology, gene design and synthesis, and directed evolution as applied to enzyme optimisation and biocatalysis. Current work involves application of machine learning and neural networks to protein structure prediction.

I am also involved in teaching and PhD student supervision responsibilities, and have successful grant writing experience. I recently received BBSRC funding of £700k for a three-year collaborative project in cheminformatics and metabolic modelling with the European Bioinformatics Institute, and a further £650k from the BBSRC to develop an integrated model building and text-mining platform.

04/99 – 04/06 **Waters Corporation** Bioinformatics Team Manager

I have seven years experience in commercial software development, as applied to bioinformatics, proteomics and mass spectrometry. During my time at Waters, I quickly developed from a software engineer, through to a team leader and ultimately a project manager, directly managing a group of five people and being responsible for a software release involving the work of nine developers.

This role was also interdisciplinary, covering all facets of the software development life cycle, from requirements gathering, software design, development and documentation, through to testing and support. Due to the focus on requirements gathering from users, and providing software support, I was frequently involved in customer site visits, user training, and conference speaking; tasks which greatly developed my skills of collaborating with biologists and chemists.

10/98 - 04/99 **AstraZeneca** Graduate Trainee

Graduate Trainee in IT problem management and data analysis.

09/94 - 08/95 **Dow Chemical Company, Stade, Germany** Student Placement

Year long placement in a varied role involving polycarbonate synthesis and analytical chemistry. Duties involved lab research, plant visits, provision of analytical chemistry support, and development of a searchable database resource of spectra of chemical standards, presentation giving in both

English and German.

Education

03/12	PhD "Systems biology informatics for the development and utility of genome-scale metabolic models". <i>University of Manchester</i>
09/97 – 10/98	MSc Computing Science <i>University of Newcastle-upon-Tyne; IRISA, Rennes, France.</i> Year long conversion course including Masters project in bioinformatics (DNA sequence analysis), undertaken in Rennes, France.
09/92 – 06/96	BSc (Hons) Chemistry with Industrial Experience <i>University of Manchester</i> First class honours; industrial experience in analytical chemistry with Dow Deutschland Inc., Stade, Germany.

Selected publications

-
- Recon 2.2: from reconstruction to model of human metabolism. **Swainston N**, et al. *Metabolomics*. 2016, **12**, 1-7.
 - Synthetic biology for the directed evolution of protein biocatalysts: navigating sequence space intelligently. Currin A, **Swainston N**, Day PJ, Kell DB. *Chem Soc Rev*. 2015, **44**, 1172-239.
 - GeneGenie: optimised oligomer design for directed evolution. **Swainston N**, et al. *Nucleic Acids Res*. 2014, **42**:W395-400.
 - A community-driven global reconstruction of human metabolism. Thiele I, **Swainston N**, et al. *Nat Biotechnol*. 2013, **31**, 419-25.
 - Improving metabolic flux predictions using absolute gene expression data. Lee D, Smallbone K, Dunn WB, Murabito E, Winder CL, Kell DB, Mendes P, **Swainston N**. *BMC Syst Biol*. 2012, **6**:73.
 - A consensus yeast metabolic network obtained from a community approach to systems biology. Herrgård MJ, **Swainston N**, et al. *Nat Biotechnol*. 2008, **26**, 1155-1160.

Funding

-
- Continued development of ChEBI towards better usability for the systems biology and metabolic modelling community. *BBSRC; Bioinformatics and biological resources fund; 2013. £682,950.* (BB/K019783/1; Co-Investigator).
 - Enriching Metabolic PATHwaY models with evidence from the literature (EMPATHY). *BBSRC; Responsive mode; 2014. £659,535.* (BB/M006891/1; Co-Investigator).
 - Modelling and sensitivity analysis of metabolic networks in diabetic neuropathy. *Faculty of Life Sciences, University of Manchester, Interdisciplinary Projects in Quantitative Biology; 2014. £46,798.*
 - Hackathon on Resources for Modelling in Biology 2014 (HARMONY 2014). *BBSRC; International workshops; 2014. £9047.* (BB/L026325/1; Co-Applicant).
 - The relationship of clusters of gene expression associated with development in childhood disease in the ageing adult. *Manchester Institute for Collaborative Research on Ageing (MICRA) Seedcorn Funding; 2014. £6000.*
 - Iron metabolism and its role in neurodegenerative disease. *University of Manchester; Faculty of Engineering and Physical Sciences Strategic Fund; 2013. £5200.*
 - Towards an integrated model of human metabolism, cell signalling and gene expression. *University of Manchester; Faculty of Engineering and Physical Sciences Strategic Fund; 2014. £4000.*

Teaching and student supervision

-
- **Teaching:** Bioinformatics, Proteomics, Systems Biology. Systems Biology Doctoral Training Centre, MRes Translational Medicine, University of Manchester, 2006-10, 2015. Systems Biology. MSc (Res) Translational Oncology, University of Sheffield, 2014-16. Data integration and Interaction Networks. MSc Applied Bioinformatics, MSc Molecular Medicine, Cranfield University, 2011-15.
 - **Tutor:** In Silico Systems Biology: Network Reconstruction, Analysis and Network-based Modelling. EBI-EMBL, Hinxton, Cambridge, 23-26 May 2011.

-
- **Student supervisor:** Systems Biology Doctoral Training Centre, University of Manchester, 2007-12; MSc Applied Bioinformatics, Cranfield University, 2013; MSc Advanced Computer Science, University of Manchester, 2014; ALM Biotechnology, Harvard University Extension School, 2014.
 - **Advisor:** University of Manchester iGEM Advisor, 2013-15.

Scientific responsibilities

- Lead conference organiser, HARMONY 2014, Manchester, 22-25 April 2014.
- Associate Editor, BMC Systems Biology.
- Invited member, Synthetic Biology Open Language (SBOL) Developers Group.
- Invited member, STREND Commission.
- Session chair. COMBINE 2010, Edinburgh.
- Scientific Committee member, International Symposium on Integrative Bioinformatics, 2010-14.
- Course Office member, FEBSX-SysBio2011: From Molecules To Function. Innsbruck, Austria.
- Nominated for election to position of SBML Editor, 2010-12 and 2011-13.
- Journal reviews, including: Bioinformatics, BMC Bioinformatics, BMC Genomics, BMC Systems Biology, BMC Biotechnology, Database, Metabolites, Nature Protocols, npj Systems Biology and Applications, PLOS Computational Biology, PLOS ONE.
- Funding reviews: BBSRC, Breast Cancer Campaign.

Computational and software development skills

- Languages: Java (Certified Programmer), Python, Matlab, C/C++.
- Web development: Javascript, AJAX, JQuery, AngularJS, Bootstrap, Google Web Toolkit, Flask.
- Data management: XML, JSON, relational, XML and graph (neo4j) databases.
- Semantic web: RDF.
- Cloud computing: Google Compute Engine.
- Software engineering: source code control (svn, git), build and deployment scripts (ant, Maven, Docker), software design with UML.
- Operating systems: OS X, Windows, Linux.

Courses and training

- **University of Manchester:** Academic career planning; Practical project management for PIs and academics; Collaboration: the hidden research skill; Communicating with your teams; Getting the best out of yourself and others; Coaching and mentoring skills for supervisors; Practical application of supervision skills; How to shine at fellowship interviews
- **Coursera:** Introduction to Genetics and Evolution; Calculus One; Astrobiology and the Search for Extraterrestrial Life; Machine Learning
- **Peter Kenyon:** The Front Line Manager
- **Pentland Training:** Project Management Fundamentals
